PROJECT TITTLE – Mailserver

Technologies-used :

Html,Node.js,Nodemailer, Mailgun
API,heroku

Github link :

<https://github.com/khitishpradhan/Mailserver>

Live APP link:

<https://mailserver82.herokuapp.com/>

Note: Only authorized addresses from Mailgun can be used to receive an email because it's a free version so can't really send mails whomever we want.

So, I have used my other email for testing purposes.

Below are the screenshots of the application.
